
Algorithm 1 System Controller Logic

```
1: loop
2:   Read sensors:  $T_{storage}$ ,  $T_{PVT}$ ,  $V_{storage}$ , LDR (Sunlight)
3:   Read external forecaster (Weather)
4:   if  $\min(T_{storage}, T_{PVT}) \leq T_{freeze}$  then
5:     {Case 4: Freeze Protection}
6:     Open storage valve; Close supply valve
7:     Turn heater ON
8:     continue
9:   end if
10:  if  $\max(T_{storage}) > T_{max\_safe}$  then
11:    {Case 5: Overtemperature Emergency}
12:    Close all valves; Turn heater OFF
13:    continue
14:  end if
15:  if  $V_{supply} < V_{refill\_threshold}$  then
16:    {Case 3: Emergency Supply Refill}
17:    Open supply valve; Open storage valve
18:    if Predicted mixed temp  $< T_{minimum}$  then
19:      Turn heater ON
20:    end if
21:    continue
22:  end if
23:  if  $T_{PVT} \geq T_{PVT\_ready}$  then
24:    if  $V_{storage}$  is FULL then
25:      {Case 8: Storage Full}
26:      Close all valves
27:    else
28:      {Case 2: Fill Storage}
29:      Open supply valve; Open storage valve
30:    end if
31:  else if Supply Valve is CLOSED and Sun is OUT and Forecast is GOOD
then
32:    {Case 1: Start PVT Flow}
33:    Open supply valve; Close storage valve
34:  else if Sun is NOT OUT and Cloud Duration  $>$  Cloud Tolerance then
35:    {Case 9: Prolonged Cloud Cover}
36:    Close all valves
37:  end if
38:  {Heater Control (Cases 6 & 10)}
39:  if  $T_{avg} \leq T_{heater\_on}$  or (No Sun Expected and  $T_{avg} < T_{target}$ ) then
40:    Turn heater ON
41:  else if  $T_{avg} \geq T_{heater\_off}$  then
42:    Turn heater OFF
43:  end if
44:  {Case 7: Passive / Night Mode}
45:  if Sun is NOT OUT and Supply valve is CLOSED then
46:    Close storage valve
47:  end if
48: end loop
```
